

Portfolio Brief: MKTIME Dynamic eCommerce Website

Portfolio Overview: The objective of this project is to develop a dynamic eCommerce website named MKTIME using Bootstrap for front-end design, SQL for database management, and PHP for server-side scripting. MKTIME will allow users to register, login, browse products, add items to their cart, and complete the checkout process.

Key Features:

1. User Registration and Authentication:
 - Users can create a new account by providing necessary details (e.g., name, email, password).
 - Implement user authentication to allow registered users to securely log in.
2. Product Catalogue:
 - Display a range of products on the website categorized by type (e.g., watches).
 - Each product should have a detailed page showing its description, price, and other relevant information.
3. Shopping Cart:
 - Allow users to add products to a shopping cart and update quantities or remove items.
 - Display the contents of the cart, including the total price.
4. Checkout Process:
 - Enable users to proceed to checkout from the shopping cart.
5. Database Integration (SQL):
 - Use SQL to design and manage the database for storing user accounts, product details, cart items, and orders.
 - Implement SQL queries to retrieve and update data as required by the website's functionalities.
6. Responsive Design with Bootstrap:
 - Ensure the website is responsive and mobile-friendly using Bootstrap framework for front-end development.
 - Design a visually appealing and user-friendly interface for seamless navigation and interaction.
